

Innovative industry with a great future

Technology and handling under control

With almost 500 successful projects to our name, we are one of the “hidden champions” of industrial wastewater and environmental technology. Our national and international customers value our specialists’ extensive expertise and many years’ experience, as well as our innovative, practical “one-stop” solutions – from consulting and project planning to the implementation and maintenance of complete water processing and wastewater treatment systems. We want to provide our customers with an even better and faster service in the future. And to achieve this, our first-rate team needs your support – as a technically experienced, proactive ...

Project Manager (m/f/d)

Aalen/Ostalb area

INDUSTRIAL WASTEWATER – ENVIRONMENTAL TECHNOLOGY

A lot of variety and freedom

You like the idea of a mix of technical, commercial and organisational tasks. With a high degree of commitment, you will independently take on the diverse challenges associated with the project management of complex, custom water processing and wastewater treatment systems: You will compile the necessary drawings, parts lists and documentation and co-ordinate internal production and assembly activities on your worksites. You will also procure system components and materials and confidently negotiate with suppliers.

Part of a great team

You will be valued both within the company and externally for your down-to-earth, communicative manner, as well as for your technical expertise, flexibility, high level of quality awareness and organisational skills. You will enjoy the wide and varied scope of your work and be passionate about using innovative technology. You will enjoy working independently, but also be happy to call on the support of a friendly, competent team.

State-of-the-art technology, exciting projects

As an engineer or technician specialising in process engineering, mechanical engineering or surface technology, you will apply your technical, PC and CAD knowledge in a targeted manner. Ideally, you will have previous experience in the field of water treatment – or will be a highly motivated newcomer or career changer, ready and raring to take on a wide variety of tasks. Whether you are working on on-going projects or planning new ones, you will love solving complex problems and implementing specific customer specifications efficiently. Compliance with chemical regulations and documenting your projects will be routine for you.

Attractive job, good pay and benefits

Take on a key role in a dynamic, innovative family-owned company that not only boasts the very latest in technology, but also a pleasant working atmosphere, short paths and a great team. Our appreciation of your commitment will be reflected in an attractive remuneration and benefits package.
