

 Innovative industry with a great future

Each system unique and your “baby”

With almost 500 successful projects to our name, we are one of the “hidden champions” with experience in all areas of industrial wastewater and surface technology. Our national and international customers value our specialists’ extensive expertise and many years’ experience, as well as our practical, innovative “one-stop” solutions – from consulting and project planning to the implementation and maintenance of complete water processing and wastewater treatment systems – with the focus constantly on the satisfaction of our customers. INTERNATIONAL ASSIGNMENTS

INDUSTRIAL WASTEWATER – ENVIRONMENTAL TECHNOLOGY

Your know-how wins

In your position, you will be responsible for the implementation and maintenance of new and existing water treatment systems on-site at our customers. You will also be responsible for inhouse pre-assembly activities, such as wiring the systems and components.

Meeting new challenges

If you are not a fan of “Scheme F” assignments, but would like to work in a technically demanding, innovative environment in which you can meet new challenges, then we are the company for you. This also applies to newcomers or career changers with relevant qualifications and ambitions. State-of-the-art technology, exciting projects.

Taking the initiative

In addition to your technical expertise as a mechatronics engineer or electrician, you will have a good command of English, which will be indispensable for your foreign assignments (40-50% of your work). Your basic knowledge of chemical processes, on the other hand, can be brought up to date in-house. Your service-oriented approach will score points with our customers, just as much so as your high degree of reliability and first-rate expertise.

The future awaits you

We offer you the advantages of a family-run company with short, unbureaucratic decision-making processes and a pleasant working atmosphere.

Just send us your application – preferably by e-mail to: info@aqua-plus.de
